## William John Ansorge's bird collections in Guinea-Bissau: an annotated list

by W.R.J. Dean<sup>1</sup>, M. Adams<sup>2</sup>, S. Frahnert<sup>3</sup> & S.J. Milton<sup>1</sup>

<sup>1</sup>DST/NRF Centre of Excellence at the Percy FitzPatrick Institute of African Ornithology, University of Cape Town, Rondebosch 7701, South Africa  
<lycium@telkomsa.net>

<sup>2</sup>The Natural History Museum, Zoology Department,  
Akeman Street, Tring, Herts HP23 6AP, U.K.

<sup>3</sup>Museum für Naturkunde Berlin, Invalidenstr. 43, D-10115 Berlin, Germany

Received 15 September 2007; revised 22 April 2009.

### Summary

W.J. Ansorge collected at least 189 species of birds during three expeditions to Guinea-Bissau. In 1909 he collected 869 skins and 10 sets of eggs of 177 species. This collection includes eggs of Helmeted Guineafowl *Numida meleagris*, Little Swift *Apus affinis*, Red-chested Swallow *Hirundo lucida*, African Thrush *Turdus pelios*, Oriole Warbler *Hypergerus atriceps*, Black-crowned Tchagra *Tchagra senegala*, Turati's Boubou *Laniarius turatii* and Black-necked Weaver *Ploceus nigricollis*, supplementing known breeding records for the country. The collection includes holotypes of *Francolinus achantensis hopkinsoni* Bannerman, *Treron calva sejuncta* Hartert & Goodson, *Indicator exilis ansorgei* Grant, *Anthus leucophrys ansorgei* White, *Andropadus virens saturiator* Bannerman, *Turdus pelios guineensis* Reichenow, *Fraseria cinerascens guineae* Bannerman, *Parisoma pulpum* Friedmann, and a syntype of *Ortygospiza ansorgei* Ogilvie-Grant. The second collection was made during April and May 1910, with at least 66 specimens of 37 species, including syntypes of *Coracias abyssinica minor* Neumann and *Cisticola vulpina* Reichenow. On his third expedition, Ansorge collected birds during January 1911, with a single specimen from March. Of this collection only 21 specimens of 11 species have been traced.

### Résumé

**Collections d'oiseaux de William John Ansorge sur la Guinée-Bissau: liste annotée.** W.J. Ansorge a collecté au moins 189 espèces d'oiseaux au cours de trois expéditions en Guinée-Bissau. En 1909, il a collecté 869 peaux et 10 lots d'oeufs de 177 espèces. Cette collection inclut des oeufs de la Pintade de Numidie *Numida meleagris*, du Martinet des maisons *Apus affinis*,

de l'Hirondelle de Guinée *Hirundo lucida*, du Merle africain *Turdus pelios*, du Noircap loriot *Hypergerus atriceps*, du Tchagra à tête noire *Tchagra senegala*, du Gonolek de Turati *Laniarius turatii* et du Tisserin à cou noir *Ploceus nigricollis*, en complétant les connaissances sur les espèces nicheuses pour le pays. La collection inclut les holotypes de *Francolinus achantensis hopkinsoni* Bannerman, *Treron calva sejuncta* Hartert & Goodson, *Indicator exilis ansorgei* Grant, *Anthus leucophrys ansorgei* White, *Andropadus virens saturiator* Bannerman, *Turdus pelios guineensis* Reichenow, *Fraseria cinerascens guineae* Bannerman, *Parisoma pulpum* Friedmann, et un syntype de *Ortygospiza ansorgei* Ogilvie-Grant. La deuxième collecte a été effectuée en avril et mai 1910, dont au moins 66 spécimens de 37 espèces, incluant des syntypes de *Coracias abyssinica minor* Neumann et *Cisticola vulpina* Reichenow. Au cours de sa troisième expédition, Ansorge collecta des oiseaux en janvier 1911, et un unique spécimen en mars. De cette collection, seuls 21 spécimens de 11 espèces ont été retrouvés.

### Introduction

William John Ansorge (1850–1913) was a medical doctor who collected birds, mammals and freshwater fish in East and West Africa in the late 1800s and early 1900s; his obituary was published in *Ibis* (10)2: 138 (1914). In 1909, while returning to England from Angola, Ansorge collected bird skins, birds eggs and nests, mammals and fish in Guinea-Bissau and some bird skins in the Cape Verde Islands. In 1910 and 1911, he made two further trips to Guinea-Bissau to collect birds, mammals and fish. Few of his bird collections have been documented: his Uganda collection as an appendix to Ansorge (1899) by Hartert (1899), and part of his collection from Gabon (Dean *et al.* 2003) and Angola (Dean & Milton 2007). Most other references to Ansorge-collected birds have been in original descriptions of type specimens.

The full list of species of birds from none of Ansorge's collecting trips to Guinea-Bissau has ever been published. The specimens were seldom mentioned in the non-passerine list of Frade & Bacelar (1955) but were more frequently included, but not consistently, in the passerine list (Frade & Bacelar 1959); Frade & Bacelar took these data from Bannerman (1931–51) and Lynes (1930) and not through first-hand examination of the collected material. The only published mention of any specimen from the second and third trips is by Zedlitz (1911). Although Ansorge did not collect any species that have not subsequently been recorded from Guinea-Bissau (Frade & Bacelar 1955, 1959, Hazevoet 1996, Rodwell 1996), his specimens are of interest, if only to add support to later sight records.

Ansorge (1889) published his experiences and zoological discoveries in East Africa, but we have not traced any manuscripts about his collecting activities anywhere after 1899. What is known about his subsequent travels has been gleaned

from specimen labels and museum catalogues, which provide the only supplementary notes on the species collected in Guinea-Bissau. Given the bias that collectors may have towards certain species or groups, the number of specimens of a species cannot be used to infer anything about its abundance in the early 1900s, even though Ansorge's collecting seems to have been largely opportunistic.

## Results

### Location of specimens

Most of Ansorge's 1908–9 bird collections from Angola, Guinea-Bissau and the Cape Verde Islands were purchased by the British Museum (Natural History), and most, if not all, of the bird skins from the 1910 and 1911 Guinea-Bissau trips were purchased by the Zoologisches Museum Berlin, a division of the Museum für Naturkunde, Berlin. The remainder of the bird skins became widely dispersed to other collections through sales and trading. Museums that hold bird or egg specimens from the 1909, 1910 and 1911 expeditions to Guinea-Bissau are as follows, with their acronyms, number of specimens held and a summary of acquisition history:

American Museum of Natural History (AMNH): 52 specimens *ex* Walter Rothschild collection.

Carnegie Museum of Natural History (CMNH): 1 specimen *ex* Cleveland Museum of Natural History.

Cornell Museum of Vertebrates (CMV): 3 specimens *ex* Frank S. Wright collection.

Darwin Museum, Moscow (SDM): 4 specimens purchased from W.F.H. Rosenberg.

Field Museum of Natural History (FMNH): 11 specimens, mostly *ex* H.K. Coale collection.

Museum für Naturkunde, Berlin (ZMB): 86 specimens purchased from Ansorge; 4 purchased from W.F.H. Rosenberg.

Museum of Comparative Zoology (MCZ): 6 specimens, history not known.

Museum of Zoology, University of Michigan (MZUM): 1 specimen *ex* Charles Klotz collection.

Royal Museum for Central Africa (RMCA): 1 specimen *ex* BMNH.

Royal Ontario Museum (ROM): 10 specimens *ex* J.H. Fleming collection, purchased originally from W.F.H. Rosenberg.

Smithsonian Institution (USNM): 6 specimens *ex* B.H. Swales collection; 2 *ex* W.N. Beach collection.

Swedish Museum of Natural History (NRM): 1 specimen, history not known.

Natural History Museum, formerly British Museum (Natural History) (BMNH): 627 specimens purchased from Ansorge; 6 *ex* Stephenson Clarke collection; 2 *ex* Hewitt collection.

Zoological Museum, University of Amsterdam (ZMA): 12 specimens *ex* Snouckaert van Schauburg collection, purchased originally from W.F.H. Rosenberg.

### The 1909 collection

The first collection contains 177 bird species, among them eight holotypes and one syntype, and has been published in part (Bannerman 1931–51, Lynes 1930). Ansonge collected over a period of about four months, including 28–29 April at Bolama (11°34'N, 15°28'W), 2–3 May at Oco (11°48'N, 15°42'W), 7–9 May at Porto Mansoa (12°4'N, 15°19'W), 14 May at Cacheu (12°16'N, 16°9'W), 14 May to 7 August at Gunal (12°18'N, 15°47'W) and 12–19 August at Bissau (11°51'N, 15°34'W).

We have traced 733 skins out of the 869 from Guinea-Bissau offered for sale to BMNH by Ansonge in late 1909 (BMNH Archives DF 200/53/12). BMNH purchased 619 skins and an unspecified number of eggs in early 1910 (report by W.R. Ogilvie-Grant on the collection and correspondence from Ansonge, BMNH Archives DF 200/53/12). The remainder, duplicates of species selected for purchase for BMNH by Ogilvie-Grant, were returned to Ansonge, who apparently sold them. To whom is not known, but some were sold to museums and private collections via W.F.H. Rosenberg, a collector and dealer in natural history specimens in London. Most of the bird specimens are now in BMNH (620 skins and all the eggs). We have been unable to find five specimens listed in the BMNH accessions register for 1910 and these we have noted as “not found” in the systematic list. From label notes we know that nests were also collected by Ansonge in Guinea-Bissau, but none of the nests were entered into the accessions register at the BMNH when the bird skin and egg collections were catalogued in 1910. In fact there is no evidence to confirm whether or not the nests were acquired by the BMNH when the skins and eggs were purchased, although the recommended items for purchase from Ansonge listed by Ogilvie-Grant (BMNH Archives DF 200/53/12) in 1910 includes “a number of nests and eggs from Angola, Portuguese Guinea, etc”. We have, however, found in the BMNH collection all the eggs collected by Ansonge in Guinea-Bissau.

### The 1910 and 1911 collections

The 1910 collection was made at only one locality, Bissau, during April and May, and contains 37 species, of which *Pterocles quadricinctus*, *Hippolais polyglotta*, *Sylvia borin*, *Buphagus africanus* and *Ploceus luteolus* had not been collected in 1909. The collection includes syntypes of *Coracias abyssinica minor* Neumann and *Cisticola vulpina* Reichenow.

In 1911, Ansonge collected in January at Bafatá (12°10'N, 14°45'W), but he also collected a single specimen (of *Coracias abyssinica*) at Chitoli (11°44'N, 14°49'W) in March. The collection contains at least 11 species, of which only *Chalcomitra senegalensis* had not been collected in 1909 and 1910.

Bird skins from the 1910 and 1911 trips were purchased by ZMB. The archives at the Museum für Naturkunde include an exchange of letters between Ansonge and Prof. A. Brauer (the Director of the ZMB at the time). According to a letter from Prof. Brauer dated 26 December 1910 (ZMB archives, Zool. Mus. Sign. S III, Ansonge, W.),

Ansoerge offered 92 skins of small birds collected in Guinea-Bissau to the ZMB, which purchased them all (collection inventory number B 687), the museum subsequently disposing of 23 of the skins to Graf von Zedlitz. The latter collection was incorporated into the ZMB collection later, but the Ansoerge specimens from the Zedlitz collection have not yet been found in the ZMB collection. To date, only 66 of the original 92 skins purchased by the ZMB have been found in the ZMB collection.

In a letter to the Director of the ZMB dated 22 Jul 1911, Ansoerge wrote from the Belgian Congo saying that he would send 50 bird skins (in fact 49 bird skins and one mammal skin) from Guinea-Bissau via Cabinda and Hamburg to Berlin. A note by the curator of birds (Anton Reichenow) on a letter dated 12 Oct 1911 from Brauer to Ansoerge stated that the ZMB was interested in only 15 skins, but eventually purchased them all (collection inventory number B 746). We have found 21 skins from this parcel in the museum collection; the dispersal of the remainder is not known.

### Systematic list

Table 1 gives for each specimen the museum number, Ansoerge field number, age and sex, locality, and collection date, where these data exist. Specimens are listed sequentially by collection month, from January to December. All are study skins unless otherwise noted. Order and nomenclature follow Brown *et al.* (1982), Fry *et al.* (1998, 2000), Fry & Keith (2004), Keith *et al.* (1992), Urban *et al.* (1986, 1997). Age categories, taken verbatim from the labels and not determined through examination of specimens, are abbreviated: ad = adult, imm = immature, juv = juvenile. Age and sex were sometimes either not noted by Ansoerge or not transcribed to labels. Similarly, the Ansoerge field number was not always transcribed onto labels when the specimens were accessioned.

**Table 1. List of all known Ansoerge specimens from Guinea-Bissau.**

Museum no.	Ansoerge no.	Age	Sex	Locality	Date
<b>Ardeidae</b>					
<i>Gorsachius leuconotus</i> (Wagler) — White-backed Night Heron

<i>Merops hirundineus chrysolaimus</i> Jardine & Selby — Swallow-tailed Bee-eater					
ZMB 36233	41	ad	♂	Bissau	3 May 1910

<sup>5</sup>Bambaia is near Bolama. No link to a skin is given in Ansonge's label notes. He simply wrote that "two eggs were collected together with the nest of swallow same as birds no. 192, 795, 796 of the Angola series" (192 = BMNH 1910.5.6.267, *Apus affinis*; 795 = AMNH 560262, *Hirundo dimidiata*; 796 = BMNH 1910.5.6.264, *Apus caffer*). This might imply that the swifts were using an old swallow nest or had built a new nest using a swallow nest as a base. The collected nest has not been found.

### Acknowledgments

Databasing of bird specimens at The Natural History Museum by WRJD and SJM was made possible by a grant from The Leverhulme Trust, for which we are extremely grateful. WRJD and SJM thank Robert Prÿs-Jones and Mark Adams for facilitating our stay at the NHM, providing working space and computer access. The following also kindly provided details of some Ansorge-collected specimens in their respective collections: Tom Trombone, AMNH, New York; Stephen P. Rogers, CMNH, Pittsburgh; Charles Dardia, CMV, Ithaca; Igor Fadeev, SDM, Moscow; John Bates and Dave Willard, FMNH, Chicago; Janet Hinshaw, MZUM, Ann Arbor; Michel Louette, RMCA, Tervuren; Brad Millen, ROM, Toronto; Kees Roselaar, ZMA, Jeremiah Trimble, MCZ, Harvard University; James Dean, USNM, Washington DC; Per Ericson and Göran Frisk, NRM, Stockholm. We thank Bob Dowsett for comments on species names and clarifying some of the identifications of species in the original catalogue. We are also grateful to James Hatton at the BMNH Archives in London and Hannelore Landsberg at the ZMB Archives in Berlin for providing information from the Ansorge correspondence. We thank Benjamin Brenneis, Pascal Eckhoff, Jürgen Fiebig and Maik Jurke at ZMB for their assistance. Lastly, we thank Clem Fisher at the World Museum, Liverpool, for posting an appeal for Ansorge-collected specimens on the eBeac network, an appeal that yielded a number of “new” specimens.
